Waxes for Paper, Packaging and Corrugated

- Full line of straight wax, blended wax (petroleum and vegetable based), and recyclable waterborne technologies

- Waterborne technology available through IGI's Enviro-Coatings line

- Products to support flexible packaging, corrugated containers, folding cartons, paper cups, and food containers

In flexible packaging, IGI products primary function is to enhance moisture barrier allowing for enhanced product freshness and protection. With proper formulation IGI products can also impart heat sealability, lamination, gloss, friction modification, blocking / scuff and grease resistance required in end uses from quick service wraps to cereal liners to chewing gum wrappers to tamper evident lidding. IGI's paraffin and vegetable waxes have been approved as compostable/biodegradable by the Biodegradable Products Institute meaning that the use of IGI products offers superior performance with reduced environmental impact.

For the corrugate container market IGI has formulated treatments from mild barrier (simple impregnation), maximum barrier and strength enhancement (cascaded), to premium, multi-component curtain coating blends formulated for a customer's particular requirement.

IGI has been a leader in the use of vegetable wax in these blends to help enhance sustainability, and through our Enviro-Coatings line we are able to offer both barrier enhancement and recyclability. In addition the Enviro-Coatings line allows for grease barrier, non-skid, and non-mar to be imparted to linerboard with minimal product application.

Folding cartons utilize wax coatings to provide enhanced gloss and barrier properties for such items as frozen pizza and fish cartons. IGI's products serve to protect the product while drawing in the customer.

Waxes have been used for years for cold drinks cups to provide liquid retention, strength retention and aesthetics.
